

## How to select the best urban bicycle.

Sports bikes are considered as good bikes with just the similar traits. They have a light frame that is generally made up of aluminum and the wheels are designed to withstand high pressure when riding. The handle bars are kept low so the rider can hunch and gears and brakes might be such that you don't have to take your hands off the bar to apply them. But if you just want to go bike riding then sports bikes might just not be the right choice for you as the wheels are smaller and breaks made for a light weight bike. You just may like to consider something like a mountain bike that is quick to stop and can be handled easily. These bikes are designed to climb steep slopes easily without much effort.

These bikes are designed to accelerate at high speeds as compared to any other normal bike. These types of bikes are created to limit the pressure of wind while maintaining good position of the rider. With one such bike you can accelerate up to speeds of 35 mph easily but there are some riders who manage going much faster. You need to select a bike that has good mud flaps to keep all the dirt away from the back of your legs and body. So if you are in fact riding in a muddy environment then mud guards are the best protections against mud. This is one choice that is available with most mountain and regular bikes but not with racing bike. So in case you are just planning to ride casually and not in any race then avoid purchasing racing bikes. There are a number of people who like challenging for speed so race bikes might just be the right option for them. It certainly is up to you to make your decision of choosing the right bike depending on your desires.

After you make your decision on the type of bike it is important that you decide on the budget you planned for. You can go around and check out with different stores nearby to your area or even check over the internet. You have to be determined how much you are ready to spend on for getting your best urban bike. Before purchasing one always keep in mind that this is generally considered as a long term investment, so you just have to think it over again before making your decision. You have to consider the right size and material before you make the payment for your bicycle. Always keep in mind that different manufacturers have different size bikes under different brand names. So before you purchase one it is important that you take a few test rides and feel comfortable when riding.
