

Baccarat - A Game Of Intrigue and Popularity

This is one of the most favored table casino games that one can enjoy either online or off. It's a game that goes back many years and is believed that it originally came from Italy. Then as time progressed it made it's way to many other countries and gaming institutions. If you are just beginning to play online casinos then be sure to make this game one of your regulars.

The way that Baccarat is played today comes from the standard way that it is played in the UK. This standard has now become the norm for most online Casinos. One of the reasons that this game has gained such popularity is because it's often seen in different movies portrayed by many famous actors in a variety of gambling scenes.

When it comes to learning Baccarat, it is probably one of the most simple table games that one can learn especially if you play online casinos. It's very similar to Blackjack because the object of the game is that you have to beat the dealer's hand. The difference here though is that there what you want to do with Baccarat is walk away a winner of the hand by totaling nine points. There is no doubt that online casino games are a never ending source of entertainment.

One thing you have to get used to though is the counting system in this particular game. Each card holds its own value but the face cards are counted as ten and aces are only one.

It may sound a bit strange that when we said that you have to reach a total of nine and this is because double digits have no value. So for example if you had a hand that you had 10+8, which would give you eighteen the only points of the count, would be the last digit which would mean that you had 8 in your hand.

There are several advantages of learning to play this game and aside from it being easy, you being in control of what you are betting on. Most often, it has a lower house edge, which is a definite bonus in itself. This same advantage applies if you play online casinos.

The interesting part of Baccarat comes from the betting options you have. You have the choice of picking one of two types of wagers. You can either bet on your hand or the bankers and so if you think you're sitting pretty with your hand then that's where you want to put your money. If you think the banker is going to wipe out your hand then place your bet there. You also have the opportunity placing a bet for a tie and this means that you are betting that both hands are going to be the same. Remember that you have the same opportunities when you play online casinos as you do with on land casinos.

If you bet on the banker and he wins then you, take back your money however, there's a catch to this because 5% of that is already going to be deducted as the casino commission charge. This is a standard rule of casino games such as Baccarat.

About the Author

Daniel W has played Baccarat for many years. He finds that having the opportunity to play online casinos has given him the chance to enhance his skills. He would recommend casino games to anyone.
